

Risk Assessment Report

Risk Details			
Risk ID	DTCOM001	Date Identified	9th of March, 2026
Risk Title	Phishing-Driven Initial Compromise	Review Date	9th of March, 2026
Risk Identification			
Risk Description	Employee opens malicious Excel attachment from phishing email, enabling attacker code execution and entry into the environment.		
Assets at Risk	Employee accounts, internal servers, payroll data, patient scheduling data.		
Threat	External threat actor using phishing as an entry vector.		
Vulnerability	Weak email filtering; inadequate phishing-awareness training.		
Existing Controls	Basic email filtering; standard endpoint protection.		
Inherent Risk Analysis			
Likelihood	Consequence	Inherent Risk Rating	
Likely (4)	Major (4)	High	
Residual Risk Analysis			
Likelihood	Consequence	Residual Risk Rating	
Possible (3)	Major (4)	High	
Risk Treatment			
Mitigations	Advanced email security, DMARC, attachment sandboxing, phishing training.		
Risk Monitoring and Review			
Risk Owner	IT Security Manager		

Risk Details			
Risk ID	DTCOM002	Date Identified	9th of March, 2026
Risk Title	Credential Harvesting and Lateral Movement	Review Date	9th of March, 2026
Risk Identification			
Risk Description	Attacker runs credential-harvesting tools, escalates privileges, and moves laterally to critical servers.		
Assets at Risk	Domain credentials, privileged accounts, file server, HR/finance systems.		
Threat	Attacker leveraging harvested credentials for expanded access.		
Vulnerability	Weak endpoint hardening; no MFA; insufficient lateral-movement detection.		
Existing Controls	Basic login monitoring; standard antivirus.		
Inherent Risk Analysis			
Likelihood	Consequence	Inherent Risk Rating	
Likely (4)	Extreme (5)	Extreme	

Residual Risk Analysis		
Likelihood	Consequence	Residual Risk Rating
Possible (3)	Major (4)	High
Risk Treatment		
Mitigations	Enforce MFA, deploy EDR/XDR, restrict privileged access, segment network.	
Risk Monitoring and Review		
Risk Owner	System Administrator Lead	

Risk Details			
Risk ID	DTCOM003	Date Identified	9th of March, 2026
Risk Title	Backup Server Encryption	Review Date	9th of March, 2026
Risk Identification			
Risk Description	Ransomware encrypts backup server, reducing ability to restore systems and risking long outages.		
Assets at Risk	Backup infrastructure, recovery capability, business continuity.		
Threat	Ransomware targeting backup repositories.		
Vulnerability	Backups not isolated; no offline/immutable copies; weak segmentation.		
Existing Controls	Scheduled backups; basic access controls.		
Inherent Risk Analysis			
Likelihood		Consequence	Inherent Risk Rating
Possible (3)		Extreme (5)	High
Residual Risk Analysis			
Likelihood		Consequence	Residual Risk Rating
Unlikely (2)		Major (4)	Medium
Risk Treatment			
Mitigations	Implement offline/immutable backups; harden backup environment; restrict admin access.		
Risk Monitoring and Review			
Risk Owner	Head of Infrastructure
